How The Lights Work

LED Light Therapy is the use of specific types of light which give off energy that stimulates your cells, thereby increasing the production of collagen and elastin. In turn, this makes your skin firmer, less wrinkled, and younger looking. This is known as Photo Rejuvenation.

LED stands for Light Emitting Diode. Diodes give off energy in the form of light. These little diodes are compact, durable, powerful, bright, efficient.

AknoF Cream:

Innovative & Scientifically Proven Action with the Power of Plant Sterols

AknoF constitutes a completely new approach to the treatment of skin impurities by having the ability to locally regulate the factors responsible for excess sebum production leading to oily skin and the development of blackheads and pimples. The main active ingredient in **AknoF** is 5AR IsoComplex, a proprietary complex of plant sterols. Due to the phytoesterol properties of 5AR IsoComplex (lipophilic agent), **AknoF** penetrates only the upper layers of the skin with no concern of systemic involvement. Clinical & toxicological studies prove that **AknoF** is completely safe. The composition of **AknoF** is also enriched with many healing, antioxidant, anti-inflammatory, antibacterial and antiseptic properties creating a complete and unique formulation against skin impurities.

Clinical Studies

In two randomized clinical studies, both carried out over a period of six months, **AknoF** Cream showed visible, positive results already after the first month.

The clinical trial participants used the product topically once in the morning and once at night after cleansing the area with the antiseptic **AknoF Soap**. Three parameters were evaluated: oiliness of the skin, number of comedones and number of inflammatory lesions. The studies showed a highly positive response to the treatment without any unwanted effects in the participants. After six months treatment, skin conditions had improved considerably in all volunteers.

According to the study protocols, 89.1% of the participants were rated as improved to a quite satisfactory degree. Likewise, patient reports and photographic documentation demonstrated a significant decrease in all the parameters tested.

AknoF Soap & Gel

Deep Cleansing & pH Regulation

The use of a good cleansing product before the application of the products **AknoF Cream** and **AknoF Roll-on** leads to better and faster results. For this reason, it is very significant to use **AknoF Soap** or **AknoF Gel** that contain Zinc Pyrithione. Zinc Pyrithione is a powerful antiseptic substance with excellent skin compatibility, particularly effective when used to cleanse the skin and remove sebum. The **AknoF Soap & Gel** products help to regulate the pH of oily skin.

Beginning

6 Months

Directions for Use

AknoF Cream: After cleansing with AknoF Soap or Gel, apply to the skin twice daily, morning and evening. At the beginning of the treatment, we recommend the use of the more aggressive AknoF Soap.

Keep only the beautiful memories of your adolescence
