

i200+^{lite} – cost effective and convenient iPulse-based IPL

The i200+^{lite} combines all the technological advantages of pioneering iPulse™ technology with sleek design and greater ease of use.

i200+^{lite}

Speed and Cost of Treatment

Like all iPulse systems, the i200+^{lite} has been designed to provide the most effective clinical treatment, in the quickest time, at the lowest possible cost to the user.

The low initial cost of the unit plus the dramatically quicker treatment time enabled by the 8.9 cm² spot size means the i200+^{lite} costs much less to operate than competitive systems. Compared with the published costs of other professional IPL systems and their replacement lamps, the i200+^{lite} is one of the most affordable—in some cases up to 80% lower in cost.

Easily Changeable Lamps

iPulse devices are designed for ease of use in every way. Pre-calibrated lamp units can be easily changed by the operator in seconds.

i200+^{lite} – cost effective and convenient iPulse-based IPL

Technical Specification

Light source:	twin Xenon lamps
Wavelength range:	530 – 1200 nm
Spot size on tissue:	8.9 cm ²
Pulse duration:	10 – 110 ms
Pulse sequence:	single or triple pulse flash
Triple pulse:	5 – 20 ms on-time 7 – 30 ms off-time
Repetition rate:	average of 0.25 Hz
Energy density (fluence) range:	0 – 20 J/cm ²
Cooling:	fan, air-cooling
Dimensions:	18.7" (high) 7.9" (wide) 21.2" (deep)
Weight:	30.87 lbs.

User-Friendly Interface

Adjustment of settings has been simplified so that little time is wasted setting the device up for different clients.

Simply select the program number appropriate to the client's condition and skin type; the operator can then vary power levels within a prescribed band.

Ready to use

Requiring no specialist installation, the i200+^{lite} just plugs into a standard wall outlet and is ready to use immediately. No on-site calibration is needed for either the main unit or replacement lamps as these optical components are pre-set. Lamp cartridges will provide the optimum light energy for treatment throughout their fixed shot count lifetime: they are just as powerful on their 10,000th shot as on their first. The computer alerts the operator when the lamp has reached its last shot and replacement is necessary.

Highly Portable

At only 30.87 lbs. and with integral carrying handle, the i200+^{lite} is ideal for users that operate at multiple locations or in multiple treatment rooms.

All Inclusive Package

The i200+^{lite} system features:

- One multi-procedural hand piece
- One lamp assembly
- Two pairs of safety glasses
- One power cord
- One user's manual
- One year parts and labor warranty
- FDA cleared for multiple indications
